How Sweet Is It?

The Betrayal of Health is a provocative analysis of America's social and health-care problems. It argues that we have failed to respond adequately to the nation's spiraling epidemics, from the rise in chronic illness to the crime rate. Based on a ground-breaking ten-year study funded in part by the W. K. Kellogg Foundation, (it) confronts our failure and proposes a model for a new, bio-behavioral approach to our medical and social ills.

The Betrayal of Health is bound to disturb and provoke.
—from the publisher

“Dr. Beasley takes us back to the basics of good health: nutrition, personal behavior, and avoiding chemicals in our environment. Doctors and pills can do little for us if we do not begin to think about the future for ourselves and our children.” — Senator Bill Bradley

“A must for those concerned about the many health problems that are related to industrial toxins and pollutants, high-chemical agriculture and nutritionless food.”
— John O'Connor, Executive Director, National Toxics Campaign

6¼" x 9¼", hardcover, \$23.00

Consciousness separates us from other animals and machines—or does it? In this important and controversial book, Daniel Dennett takes on one of science's Big Questions and revises our traditional view of consciousness, replacing it with a radically new model. He claims we must abandon not just the dualism of mind and body that is our legacy from Descartes, but also what he dubs the Cartesian Theatre, the mythical place in the brain "where it all comes together" for "presentation" in consciousness. What we think of as the stream of consciousness is not a single, unified sequence, he argues, but "multiple drafts" of reality composed by a computerlike "virtual machine," hard-wired in some areas, programmable in others.

Dennett weaves a richly detailed narrative enlivened by a series of brilliant thought experiments and analogies as entertaining as they are challenging.
—from the publisher

"A remarkable meditation on consciousness—in part, deconstruction, in part construction—by one of our most outstanding synthesizers."

—Howard Gardner
Author of *The Mind's New Science*
and *The Shattered Mind*

Little, 1991, 511 pages, illustrated, 6¼" x 9½", hardcover, \$27.95
