Analyzing Data?

JMP® Version 3.1

Statistical Discovery Software

JMP Version 3.1 features:

- complete analytical capabilities
- exceptional data visualization
- statistical quality control charting
- integrated design of experiments
- robust modeling facilities
- powerful survival analyses

JMP makes data exploration simple by presenting a graph with almost every statistic! JMP Version 3.1 is available for Windows™ 3.1 or later, Windows NT™, 680x0 Macintosh® & Power Macintosh™.

Now for Windows and Power Macintosh

This dictionary is designed for anyone who has ever been confused by the often bewildering and unusual names of plants. As well as being a reference source for some 16,000 of the more commonly occurring scientific and vernacular names for herbs, shrubs, trees, and ferns, the dictionary offers a host of unusual facts and beliefs. For instance, did you know:

- There are more than 30,000 cultivars of carnations?
- Cyclamen tuber supposedly cures baldness when used as snuff?
- A poinsettia needs to be grown in artificial light?
- The latex of the fig is used against warts?

Descriptions of each plant, its geographical distribution, and its applications in such areas as medicine and industry are given, along with the derivations of the names themselves. The dictionary contains more than:

- 500 family entries
- 2,000 genus entries
- 5,000 species entries
- 2,000 of the more commonly occurring specific epithets
- 6,000 common names

There is also a full glossary of technical terms and abbreviations.
